

No other projector gives you so much for the money!

NEW ARGUS 300 WATT PROJECTOR

Now the color photographer can view his slides extra big . . .
extra brilliant!

And here's why. The new Argus 300 Watt Projector features the same fine precision engineering that goes into world-famous Argus cameras. Its scientifically designed optical system is the finest of its kind. Its wide angle, four-inch f:3.5 lens gives you a brilliant image, sharp and clear over the entire screen—a *big* picture even in a small room. An exclusive "right-side-up" rotary slide carrier prevents upside-down pictures. Your valuable slides are protected *always* by a powerful but silent blower and a special heat-absorbing lens. A unique elevating device lets you center your pictures with a touch of your finger.

It's compact and handsomely styled—the perfect companion for any 35mm camera.
